

Open End Yarn Product Range

OE Yarn Count Range

Weaving – Ne 6s to 34s

Knitting – Ne 6s to 34s

Denim – Ne 6s to 20s

Double Yarn is also available in finer counts

OE Yarn for Home Textile Fabric

Count : 6s to 20s & 2/20s OE

- Bulkiness gives good comfort
- Good dimension stability
- Long durability

OE Yarn for Knitted Fabric

Count : 16s to 34s OE

- High evenness of the surface is suitable for perfect prints
- Good dimension stability, no twisting of the seams
- Long lasting
- Firm feel

Denim Bottom Wear

Count : 6s to 20s OE

- Bulkiness gives good comfort
- Long lasting
- Firm feel

RAMCO'S New Contamination-controlled Open End Yarn

No. of Rotors – 4176

Production Capacity – 850 tons /Month

The movement up the value chain in yarns. We first demonstrated our commitment as early as 1982, by introducing Open End Yarn in South India. This was achieved through the installation of the Open End Spinning Machine from Reiter, Switzerland.

Since then our expertise has been evolving and we now have the Schlafhorst Autocoro A09 and the Reiter Preparatory Machines. This will make a visible difference in quality of counts from Ne6/1 to Ne34/1, made from Virgin / Non-virgin cotton.

Applications like weaving, knitting and denim will showcase our new strengths. We were the pioneers and we are rapidly and consistently upgrading and making a mark in quality-conscious markets of the World.

Ramco Autocoro Open End Yarn Features

Better Piecing Strength and Quality

Completely digitally-controlled piecing, integrated with single motor drives for individual spinning position, ensures parent yarn quality at every piecing. There is no variation in yarn strength at piecing

Higher Package Weight and Better Unwinding Quality

The intelligently produced packages with Digi-winding have straight flanks and up to 10% higher weight. We can supply package with up to 350 mm diameter weight, up to 4 kg per cheese. In addition to higher package weight, the better unwinding properties help to minimise the operating time in the subsequent process.

Low Yarn Defects

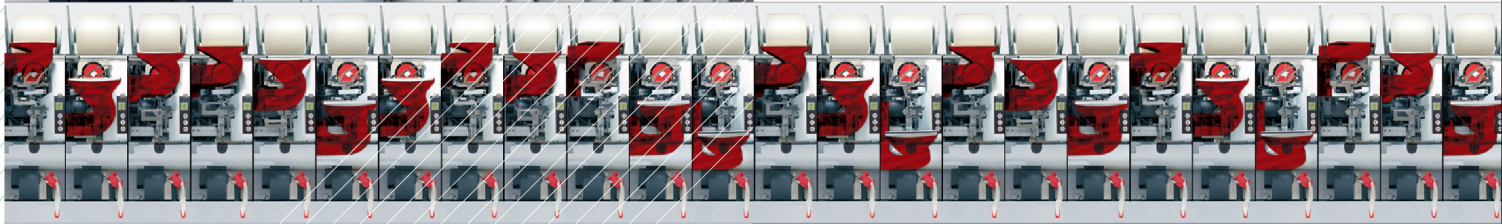

Corolab XF Yarn Clearer not only clears the objectionable yarn faults, but also clears the moire effect (continuous yarn faults).

Low Contamination

Two tier contamination clearing system, contamination removing machine in Blow Room and Contamination Clearer in OE Machine, ensure minimum levels of contamination.

Fancy Yarn Effect

We can add fancy effects in Open End Yarn without compromising the yarn quality.

Autocoro Open End Yarn is available in

Virgin Cotton | Non-virgin Cotton | Organic Cotton | BCI Cotton | Fair Trade Cotton | CMIA Cotton

Schlafhorst Autocoro Open End Yarn is available in our units :
